Rules of Conduct

A wounded deer is a harvested deer

North Promontory CWMU Description

The North Promontory CWMU is located on the north Promontory Mountains. The highest elevations are in the south at **7300 feet** on Messix Peak. These high elevations decrease to 6500 feet in the north. Another high point is in the southwest corner of the Unit, Mt. Tarpey, about 7000 feet. Mt. Tarpey elevation decreases to Antelope Flat, 5300 feet. Most of the Unit extends from these higher elevations to the west where the boundary is about **4500 feet**. Two drainages cut the Unit on the west side, South Cold Water, 4800 feet to 6300 feet and North Cold Water, 5000 feet to 6300 feet. On the east side of the Promontory Mountains, North Canyon is the dominant drainage, 4900 feet to 5800 feet.

Most of the higher elevation on the North Promontory Cooperative Wildlife Management Unit (CWMU) is Great Basin **Pinyon-Juniper Woodland** (37). Mixed among this Woodland and at lower elevations are large patches of Inter-Mountain Basins **Big Sagebrush Shrubland** (48). Towards the northwest among these Sagebrush Shrubland are large areas of **Invasive Annual Grassland** (122). Inter-Mountain Basins **Semi-Desert Grassland** (76), Great Basin Xeric Mixed **Sagebrush Shrubland** (49), and **Invasive Annual and Biennial Forbland** (122) also contribute to the land cover of the Unit.
